

2.

a.

At  $\omega = 0.3\pi$ 

At  $\hat{w}=0.44\pi$

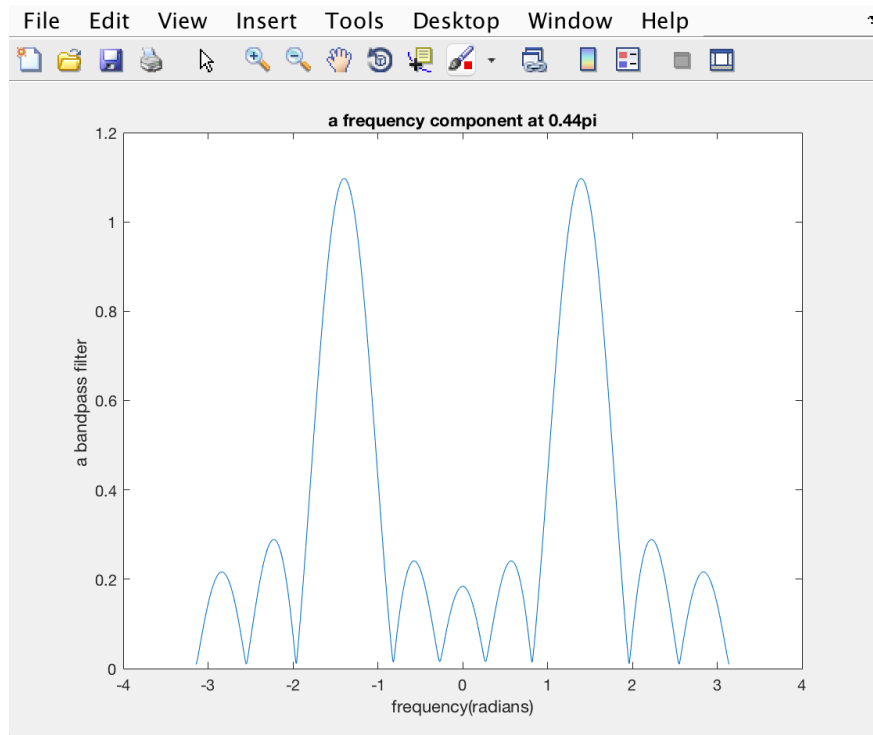

At  $\hat{w}=0.7\pi$

b.

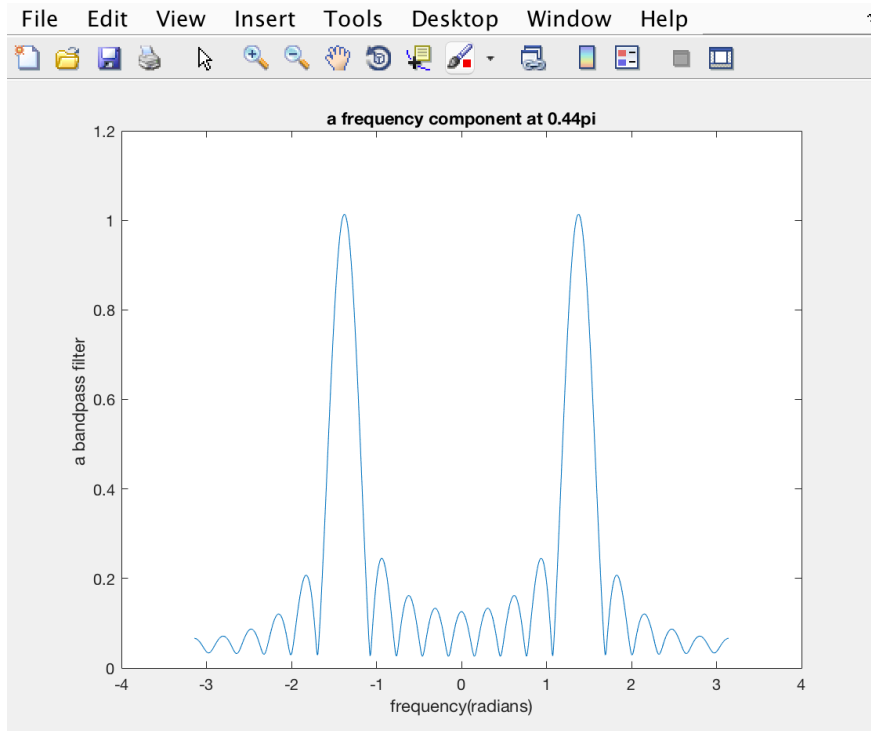

At  $L = 10$

PassBand Width = 0.162

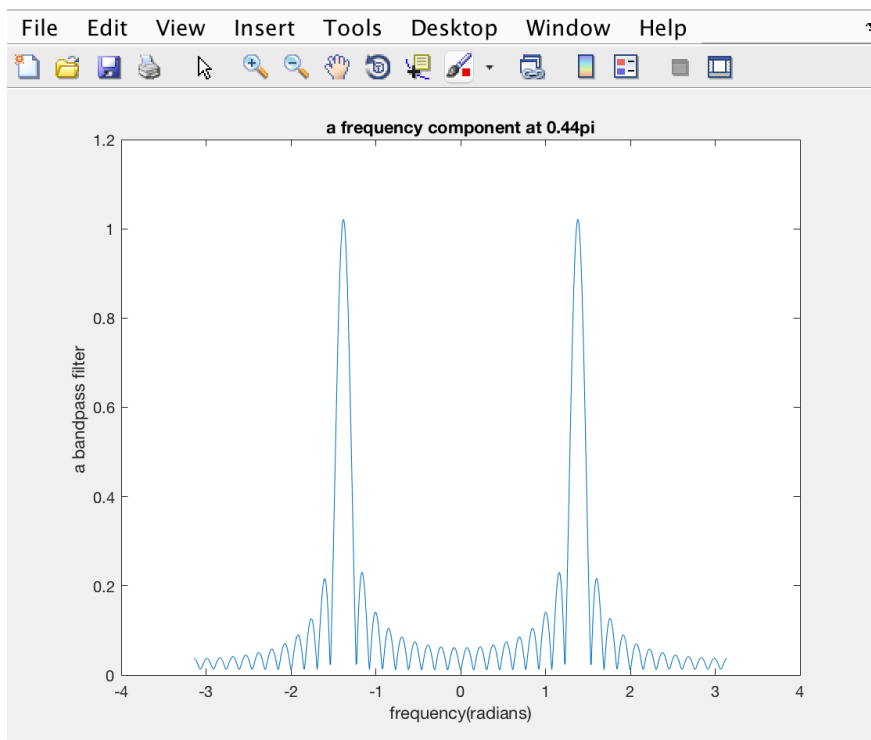

At  $L = 20$ ,

PassBand Width = 0.0880

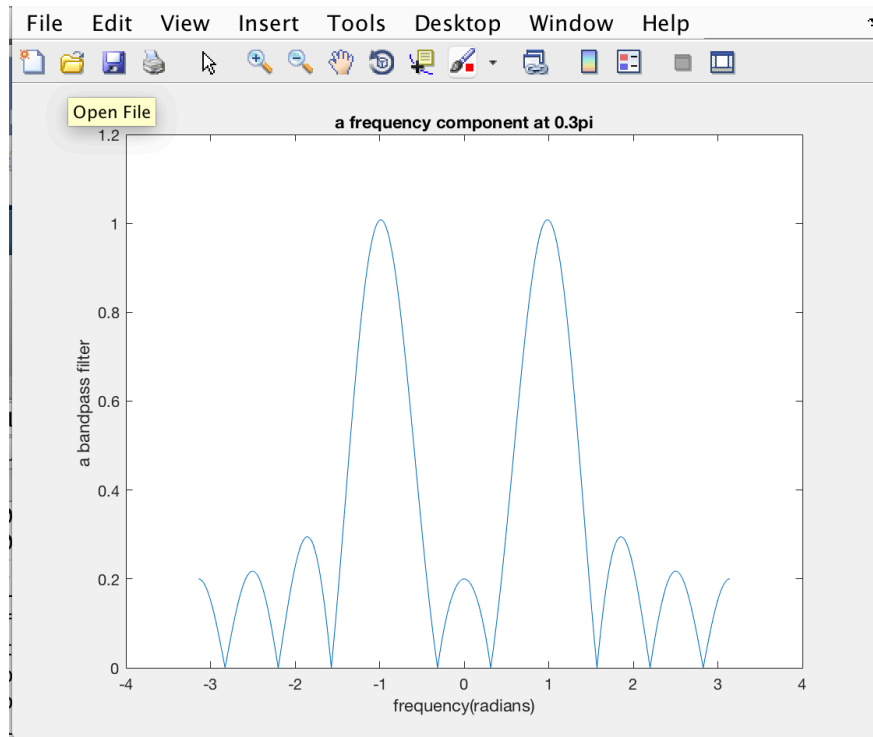

At  $L = 40$ ,

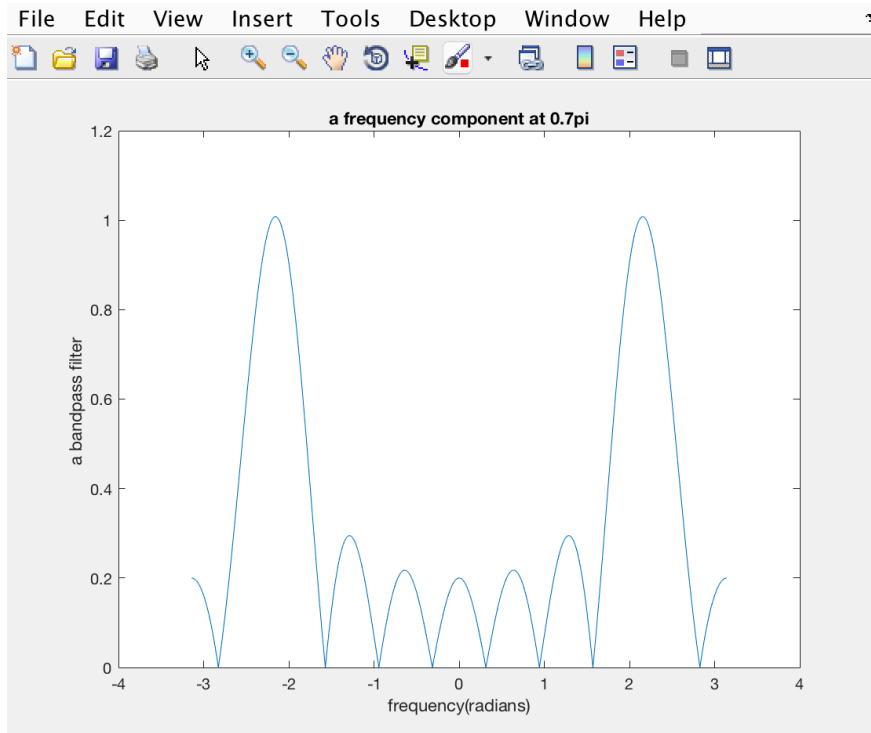

PassBand Width = 0.042

If  $L$  is doubled then passband width starts to decrease proportionally, while when  $L$  is half, the passband width starts to increase proportionally.

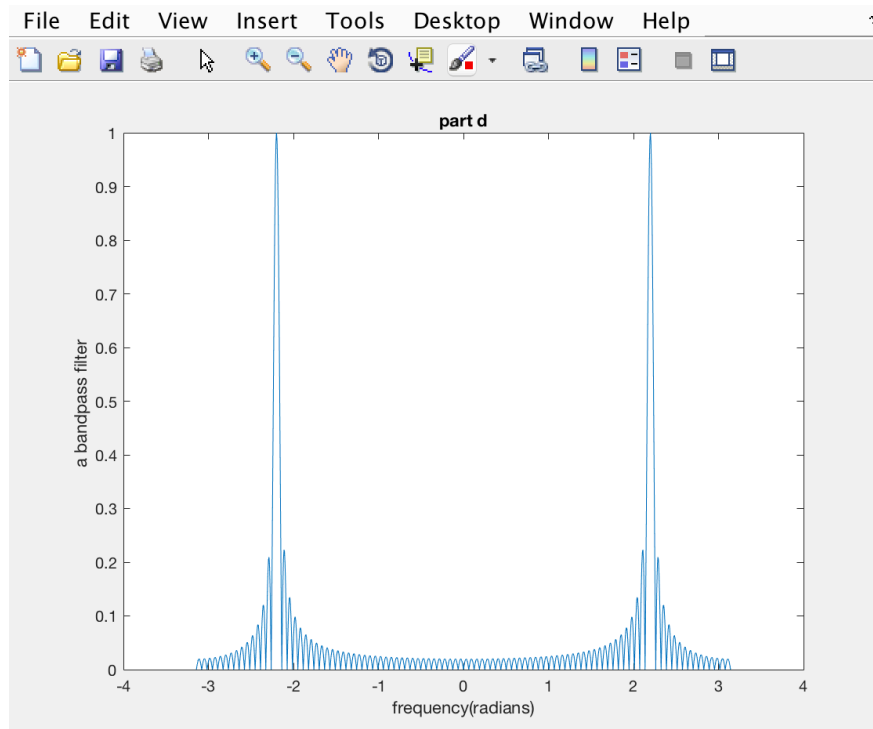

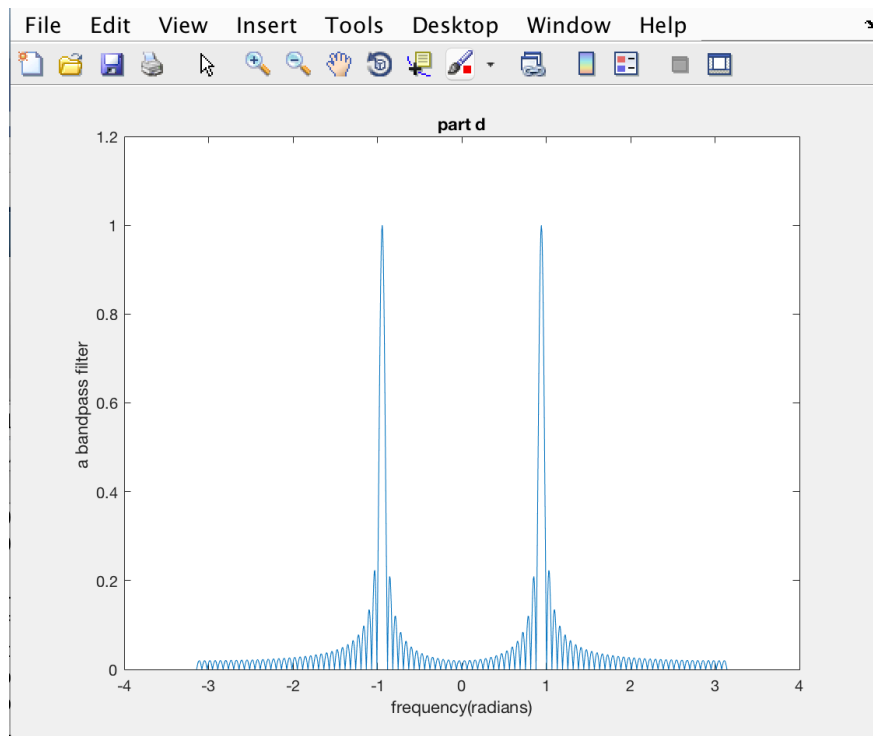

C.

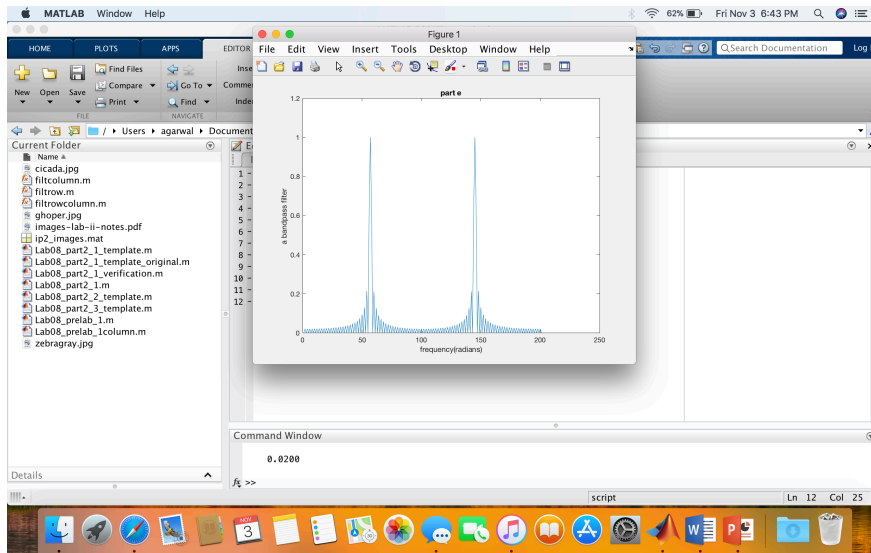

d.

e.

f.
